

Allowing Location Services – iPhone

When downloading the Safety Notice app on an iPhone, you need to allow Safety Notice to access your location so the app can send a GPS signal to loved one's followers.

Below is the method for turning on that service:

Step 1:

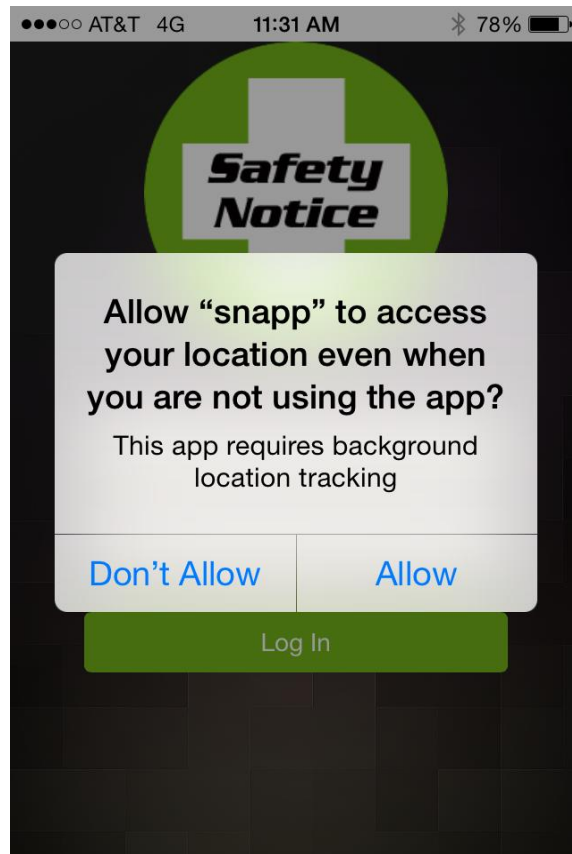

Go to the iTunes store. Download the Safety Notice app by pressing “Install” (Figure 1).

(Figure 1)

Step 2:

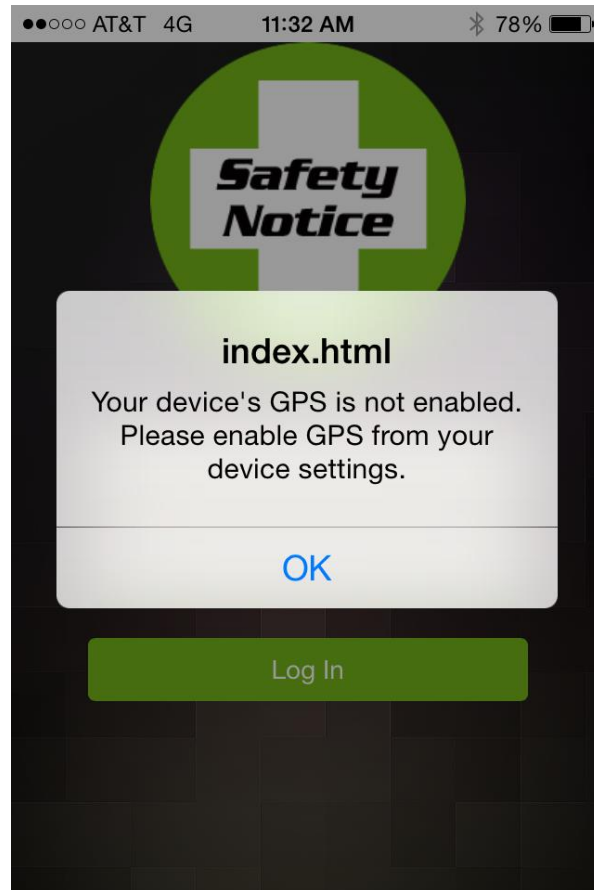

When you open the app for the first time, you will receive a popup saying, “Allow “snapp” to access your location even when you are not using the app? This app requires background location tracking” (Figure 2). THIS MESSAGE IS SOMEWHAT MISLEADING. THE SN APP DOES NOT ACCESS YOU WHEN THE APP IS OFF. HOWEVER, YOUR PHONE’S GPS SIGNAL REMAINS ACTIVE, GIVING IT ACCESS TO OTHER GPS-RELATED TOOLS. Select “Allow.” GPS capabilities are turned on, and you can skip to Step 10.

(Figure 2)

Step 3:

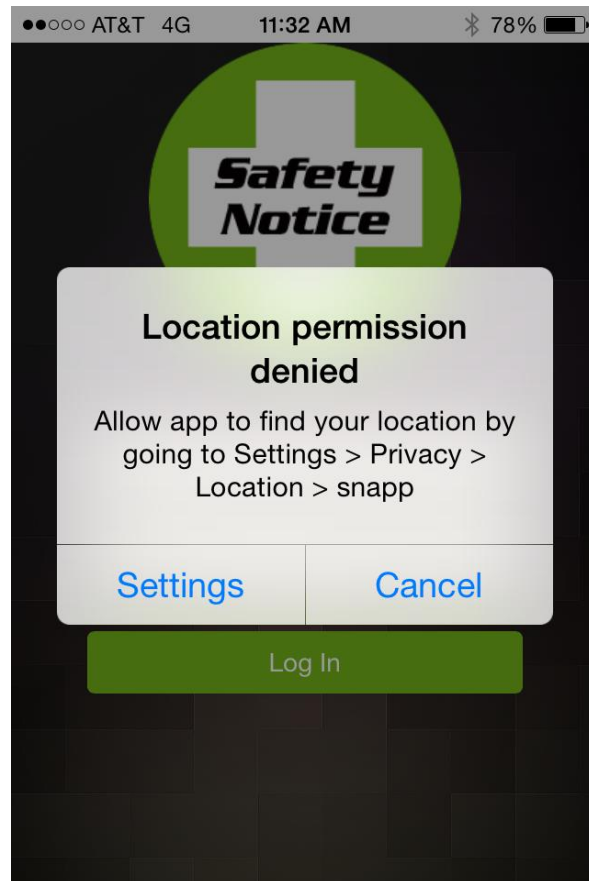

If you press “Don’t Allow,” you will receive the message “Your device’s GPS is not enabled. Please enable GPS from your device settings” (Figure 3). Select “OK.” *You can skip down to Step 5 to continue the steps through your device’s settings manually, or you can close the app, reopen it, and continue with Step 4.*

(Figure 3)

Step 4:

After selecting “OK” in Step 3, you will get a popup saying “Location permission denied. Allow app to find your location by going to Settings > Privacy > Location > snapp” (Figure 4). Select “Settings” to take you directly to the location in your phone’s settings to turn on location services. Skip to Step 8. If you select “Cancel,” the app will still not be allowed to access your GPS and you will either have to turn Location Services on manually (Step 5) or close the app and try again.

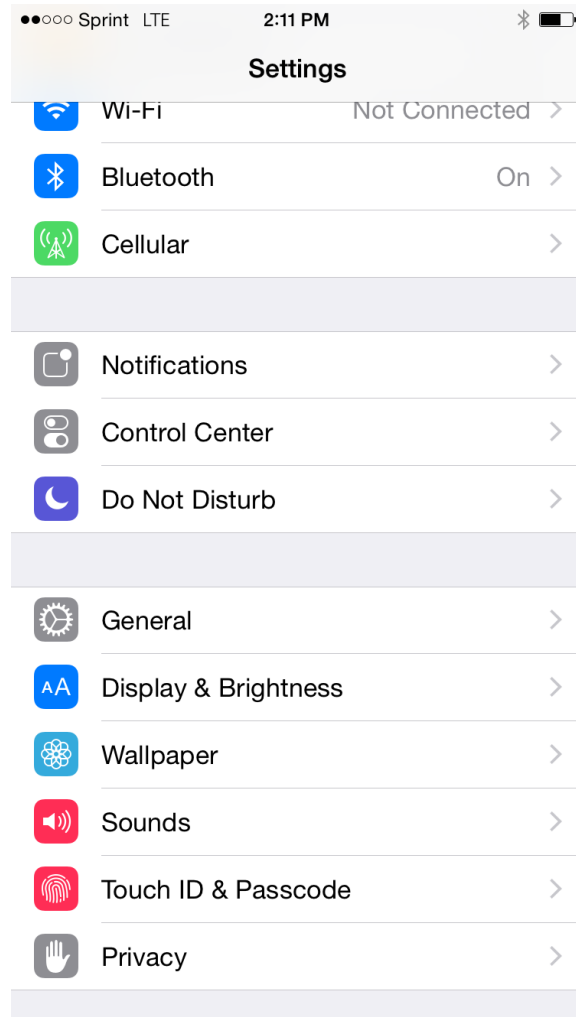

(Figure 4)

Step 5:

MANUALLY TURNING ON LOCATION SERVICES

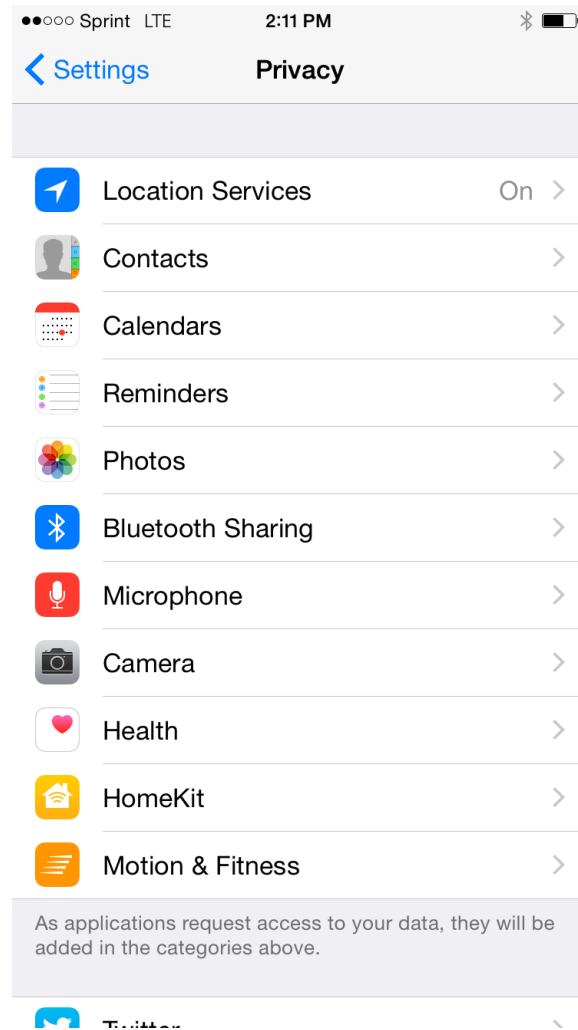

Open your Settings app on your iPhone (Figure 5).

(Figure 5)

Step 6:

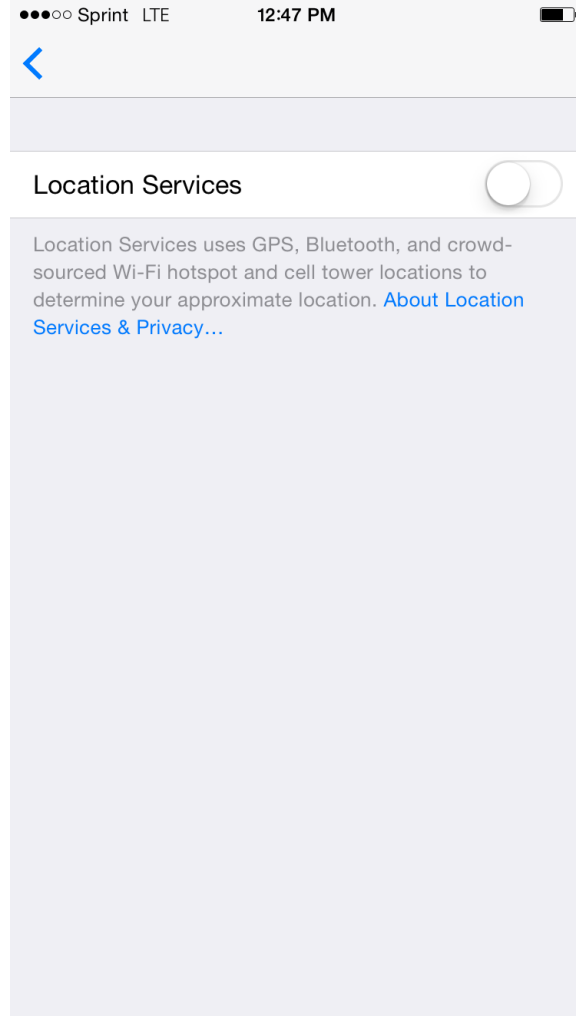

Select “Location Services” (Figure 6).

(Figure 6)

Step 7:

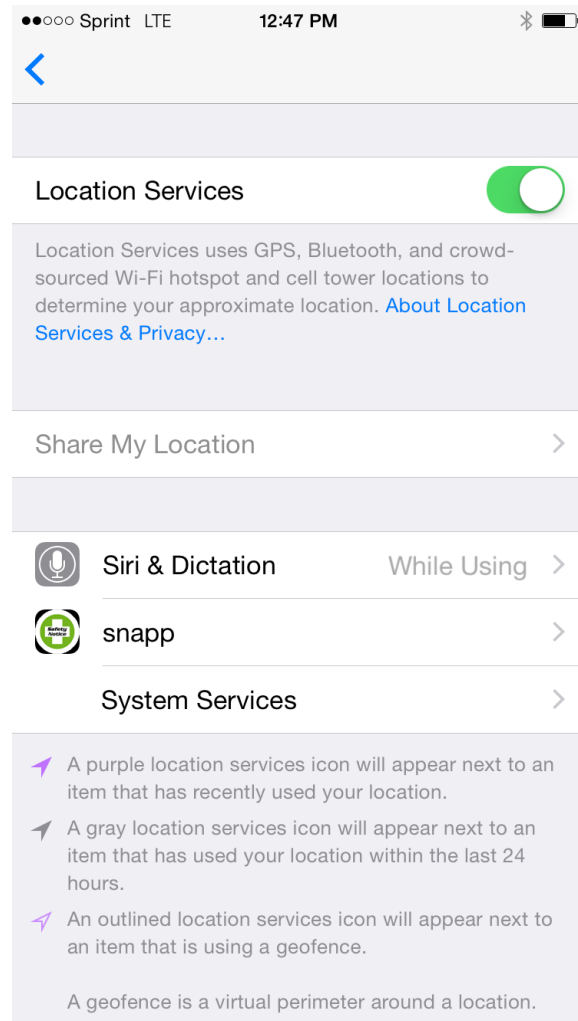

Once in Location Services, you will notice that the toggle switch is either off (Figure 7) or on (Figure 8). If the toggle switch is off (not green), slide it on.

(Figure 7)

Step 8:

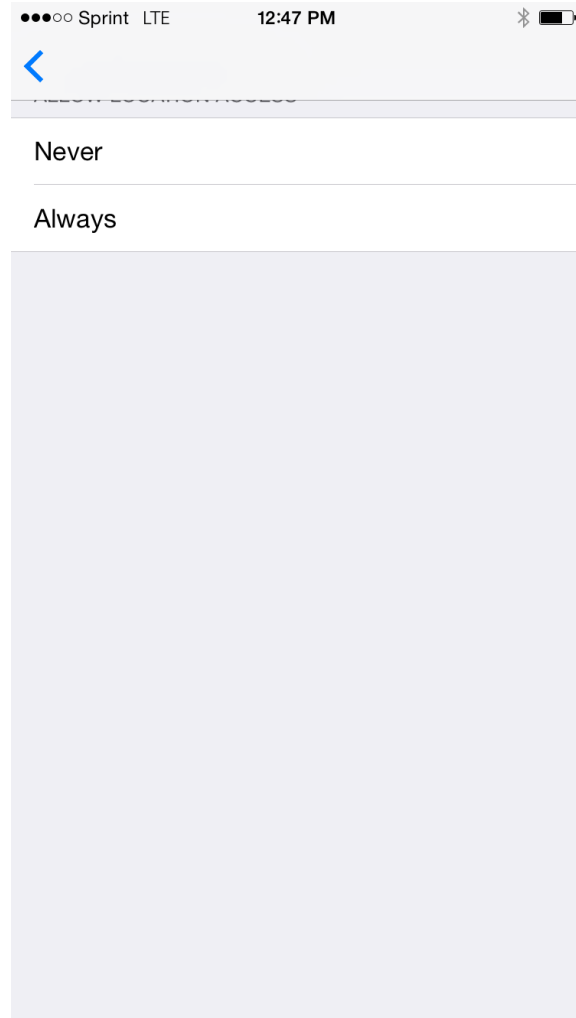

Once the toggle for Location Services is turned on, you will notice that a list of apps that are GPS capable is visible below. Choose “snapp.”

(Figure 8)

Step 9:

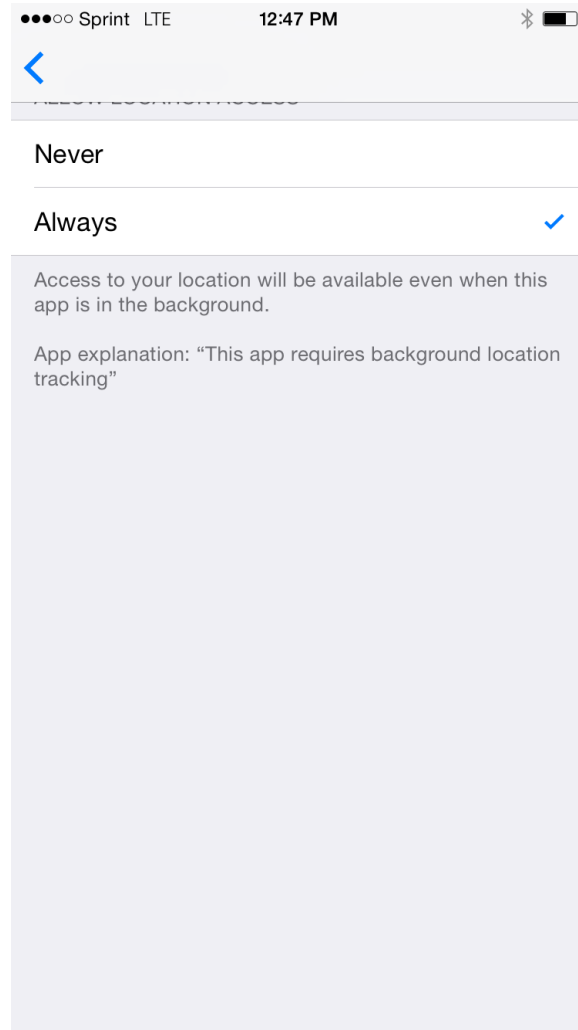

You should see two choices for the “snapp” location services: “Never” and “Always” (Figure 9).
Choose “Always.”

(Figure 9)

Step 9 (cont'd):

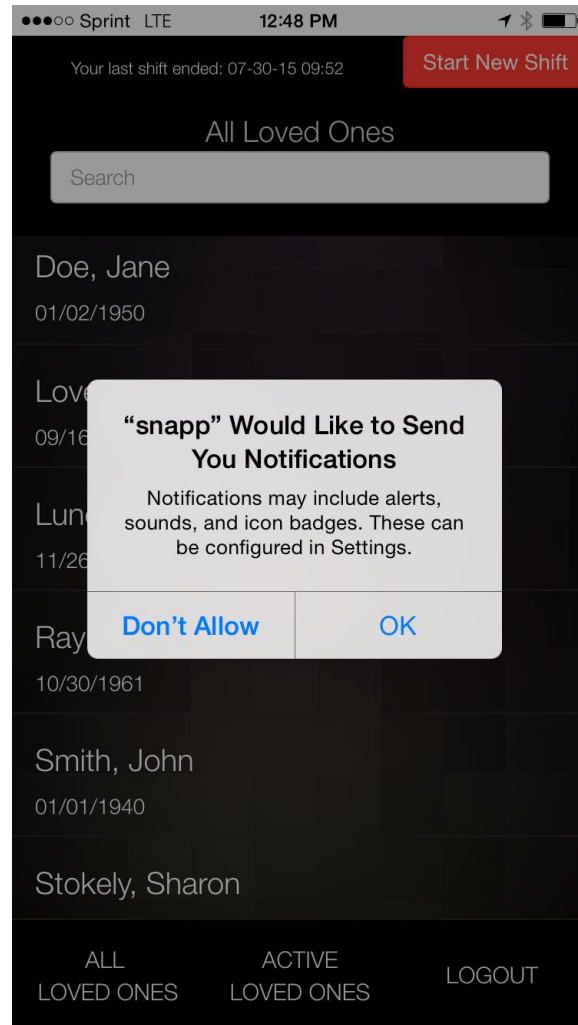

Once you select “Always,” a check will appear next to it (Figure 10).

(Figure 10)

Step 10:

You're ready to open the Safety Notice app and sign in with your Username and Password. Once you sign in, you will receive a popup saying "'snapp' Would Like to Send You Notifications" (Figure 11). Select "OK" to make sure you get notifications. This is important in situations when you forget to press the "Departure" button after interacting with a loved one.
